NANOTEX[®]

NANOTEX® HIGH PERFORMANCE NANO TECHNOLOGY BUILDS PERMANENT STAIN PROTECTION INTO THE MOLECULAR STRUCTURE OF THE FABRIC.

The Nanotex® high-performance technology was developed for apparel in the year 2000 making its mark in well known retail stores. Nanotex® covalently bonds to the fiber of the textile and lasts the life of the fabric. It is durable to laundering, soft to the touch and safe to be next to the skin.

Applied Textiles introduced the Nanotex® technology to the commercial interiors market to provide the superior stain protection across a variety of textiles. It is effective at preventing fabric stains from dirt and spills including coffee, soda, wine, mustard, salad dressing, blood, urine and iodine.

Nanotex® continues to evolve onto new applications such as Nanotex® for Top of Bed. This stain-free bedding application is environmentally considerate, reducing replacement cost and increasing wash and dry efficiency.

With the ability to combine Nanotex® with all other processing technologies you can create a product suitable for any environment. We will continue to Protect Beauty for any fabric, on any application, in any space.

+ NANOTEX®

APPLICATIONS Upholstery, Drapery, Sheer, Cubicle Curtain, Panel, Shower Curtain, Wall-Covering, Headboard
